

Homework 03 Review for Group 20

General Feedback

Overall, your implementation contains all the major features required with minor opportunities for improvement. It would be nice to actually see your lander landing.

Task 01 - Experience Replay Buffer

Overall, your implementation looks great. I like the max buffer size you added.

Task 02 DQ Network

Your network implementation also looks great. There's nothing to add here.

Task 03 DQN Training

Your training procedure also looks good and your approach for tackling the moving targets problem seems alright. However, I think you should sample actions from the target network and not from the training network as you did.
